

ContaQue — Complete User Guide

Mastering the 5 Specialized Lead Engines, Database Pipeline & Bulk Email Outreach

Core Architecture Principle:

ContaQue has 5 specialized lead-generation engines. Each engine works with a different type of data source, so choosing the right engine depends on where the businesses/contacts you need are most likely to be listed.

1. Understand the Lead Engines First

1. Google Business Data

Best for: Local & Google-listed businesses

Finds businesses that are actively listed on Google Business / Google Maps. Ideal for local shops, agencies, dental/medical clinics, restaurants, hotels, contractors, salons, gyms, real-estate firms, and professional services with a physical or verified Google listing.

CONCRETE EXAMPLE:

"Dental Clinics in New York" -> Use: Google Business Data

WHEN TO USE: Use this engine whenever your target business is likely to have a Google Business listing.

2. Business Index

Best for: Businesses with a digital / social presence

Broader than Google Business Data. Designed to find businesses with an active digital footprint across platforms such as LinkedIn, Instagram, Facebook, YouTube, and indexed web sources. Useful when target businesses do not rely primarily on Google Maps.

Custom Website URL Search:

Business Index also allows you to target a specific website URL. If you know a directory or index where your targets are listed, input that URL to extract available data directly.

CONCRETE EXAMPLE:

"European Real Estate Companies" -> Use: Business Index

WHEN TO USE: Use when targets have an online/social presence, without strictly needing a Google Maps listing.

3. Yellow Pages

Best for: Yellow Pages directory data

Specifically built for businesses listed in traditional Yellow Pages-style business directories (e.g. yellowpages.com, yell.com). A dedicated directory-specific source for contractors, tradesmen, and service providers.

CONCRETE EXAMPLE:

"Plumbers in California" -> Use: Yellow Pages

WHEN TO USE: Use when your target businesses are heavily cataloged in traditional directory listings.

4. Yandex

Best for: Russia-focused business discovery & MAX Messenger

A dedicated search and business discovery ecosystem tailored for businesses in Russia and CIS regions. A major advantage is extracting MAX Messenger/chat-ready contact numbers where available alongside standard phone numbers.

CONCRETE EXAMPLE:

"Real Estate Brokers in Moscow" -> Use: Yandex

WHEN TO USE: Use whenever your target market is Russia/CIS and you want data from the Yandex ecosystem.

5. WhatsApp Radar

Best for: Businesses with WhatsApp click-to-chat numbers

A specialized radar engine for uncovering businesses where WhatsApp contact numbers (wa.me/ direct chat links) are publicly indexed. Built specifically for outreach strategies that prioritize WhatsApp direct messaging.

CONCRETE EXAMPLE:

"Restaurants in Dubai with WhatsApp" Use: WhatsApp Radar

WHEN TO USE: Use when WhatsApp-ready contact information is the primary channel for your cold outreach.

2. How Do I Choose the Right Engine?

Always ask: Where are my target businesses most naturally listed?

Your Requirement / Target Profile	Recommended Engine	Primary Source
Local businesses / Google Maps businesses	Google Business Data	Google Places API
Businesses with LinkedIn, Instagram, Facebook presence	Business Index	Social Platforms
Specific website directory you want to extract from	Business Index	Custom Domain
Yellow Pages directory businesses & local trades	Yellow Pages	Yellow Pages / Yell
Russia-focused businesses / Yandex ecosystem	Yandex	Yandex + MAX
Businesses where WhatsApp direct chat numbers are needed	WhatsApp Radar	wa.me Radar Index

Simple Decision Rules:

- Google listing -> Google Business Data
- Social / online presence -> Business Index
- Specific directory -> Yellow Pages
- Russia / Yandex ecosystem -> Yandex
- WhatsApp contacts -> WhatsApp Radar

3. After You Generate Leads — What Next?

Generating leads is only the first step. Once your leads are extracted, they are automatically stored in your permanent Database. You do not need to immediately contact them — you can build your pipeline over time.

STEP 1

Lead Generation

Select engine, keyword & location to discover verified contacts.

STEP 2

Lead Database

Manage, search, deduplicate, filter by email, and export to Excel/PDF.

STEP 3

Outreach Campaign

Pick target leads and send personalized bulk emails via your Gmail.

4. Bulk Email Outreach System

ContaQue includes a dedicated, non-spam cold email engine. The basic workflow is:

Connect Gmail Account -> Select Leads from Database -> Create Campaign -> Send Automatically

Step 1: Add your Gmail account (via Google App Password)

Connect your Gmail account using your Gmail Address + a 16-digit Google App Password (requires 2-Step Verification enabled in Google Account). ContaQue uses direct secure SMTP binding without OAuth token expirations.

Step 2: Select your leads from the Database

You never have to copy-paste email addresses. Simply filter your Database for leads with verified emails, choose the target list, and pass them directly into a new Outreach Campaign.

Step 3: Create and launch your Campaign

Configure campaign name, email subject, personalized email body, target recipients, and select the sending Gmail account. ContaQue sends with automated spacing and tracks delivery status in real-time.

5. Lead Generation vs. Email Outreach

Lead Generation (Find & Store)

Find businesses and contact information across 5 engines.

Formula: Engines -> Database

Email Outreach (Contact & Convert)

Deliver cold outreach emails to targeted leads safely.

Formula: Database -> Campaign -> Gmail

Remember the Flow: FIND -> STORE -> SELECT -> OUTREACH
